

URVE Locker

# Convenient management of employee lockers

**URVE Locker** is a dedicated solution for remote **management of employee lockers in workplaces**, where the **employee cards (RFID)** are used on a daily basis.

The system effectively supports a multi-shift work system, particularly when the number and availability of lockers is limited.

## The system allows:

1

Optimizing locker usage  
(allow to have fewer lockers  
than the number of  
employees per shift)

2

Automation in lockers  
management (managing  
the arrival to work, leaving work  
or holidays of an employee)

3

Easier lockers  
operation (employee  
does not need a key  
or access code)

URVE

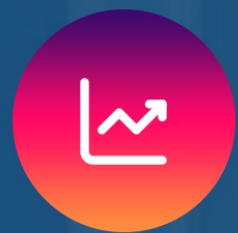

# Product features and benefits

Increased efficiency  
in managing of  
employee lockers

Use of unused  
lockers

Optimization of the  
use of available lockers  
in the shift system

Replacement of locker  
keys and codes with  
the existing employee card

Managing lockers  
with your RFID  
employee card

Cost optimization due  
to the complete automation  
of the operation

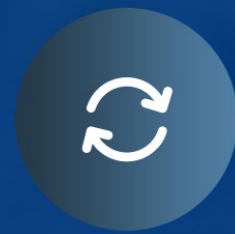

One locker can have  
several owners

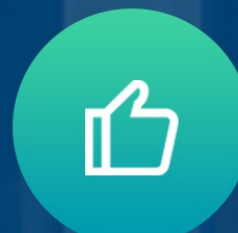

Possibility of excluding  
selected lockers from use

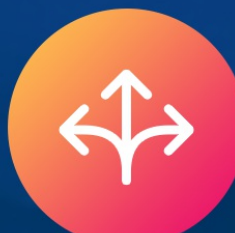

Defining access to  
lockers according  
to time periods for  
employee shifts

Possibility of using one  
locker for employees  
from different shifts

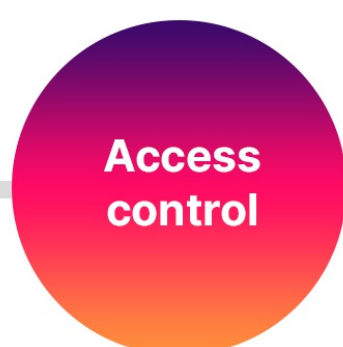

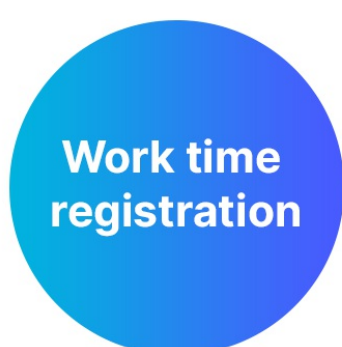

Emergency  
opening of lockers

More possibilities at  
a fixed investment cost

**URVE Locker can integrate itself with other systems  
used by the company:**
